Mathematical Methods and Modeling for Complex Phenomena

Mathematical Methods and Modeling for Complex Phenomena provides a place to systematically summarize recent developments, discoveries and progress of mathematical theory, methods, physical theories and techniques on complex phenomena. The series is intended for scientists, engineers and graduate students in a wide range of fields.

Topics of this series include but are not limited to: Soft condensed matter physics, biology, composite materials, nanotechnology, stock market dynamics, plasma physics, condensed matter physics, astrophysics, optics, fluid dynamics, applied mechanics, nonlinear control and circuits, chaotic dynamics and fractals, and fractional calculus.
